SUMMARY

Backend Engineer with 2+ years building production Scala and Java systems — including a Shadow IT governance platform and end-to-end credential management features at a Y Combinator startup. Experienced in access control architecture, event-driven systems with Kafka, and MongoDB schema design at scale.

WORK EXPERIENCE

Backend Engineer, Swif.ai (Y Combinator), Sunnyvale, CA Aug 2025 – Mar 2026

- Architected a multi-layered Shadow IT governance platform in Scala — consolidating domain filtering, MDM policy, and software blocking into a unified API, monitoring 7,000+ OAuth activities and reducing unauthorized access by ~30% across 500+ enterprise users
- Built end-to-end PII tracking pipeline from browser extension event ingestion through reporting APIs and insight dashboards — enabling compliance teams to monitor sensitive-app activity and generate scheduled 4-stage audit reports
- Designed and implemented Password Vault from scratch — engineering admin CRUD and sharing APIs, employee-facing browser extension endpoints, and a custom AES-256-GCM key-unwrapping layer for secure credential distribution across team boundaries
- Delivered enterprise integrations including AWS Marketplace billing lifecycle, CrowdStrike OAuth, and Google HRIS sync via Kafka; optimized MongoDB schema and indexing for high-volume access records, reducing query overhead on core Shadow IT collections

Software Engineer, Systex, Taipei, Taiwan May 2024 – Aug 2025

- Contributed to backend-to-frontend decoupling by helping migrate server-side JSP rendering to a Vue.js SPA — improving page load times by 40% and increasing user engagement by 20%
- Developed RESTful APIs in Java Spring Boot across 4–5 multi-step workflows (~16–20 endpoints with full CRUD); integrated Swagger UI to improve API documentation and developer onboarding

EDUCATION

Boston University, Boston, MA Sept 2021 – May 2023

Bachelor of Arts, Mathematics and Computer Science | GPA: 3.67/4.0, cum laude

Coursework: Software Engineering, OOP, Data Structures & Algorithms, Databases, Computer Architecture

University of Connecticut, Storrs, CT Aug 2019 – May 2021

Transferred | GPA: 3.98/4.0

PROJECTS

Boston 311 Data Analysis Jan – May 2023

Data Analyst | *Boston University Spark!*

- Collaborated with Boston City Council to analyze 20+ years of city service request data using SQL, Python, and Excel to surface trends and resource gaps across Greater Boston
- Applied machine learning to 1.5M+ service records to identify under-resourced areas; presented findings and recommendations to clients at BU Spark!

TECHNICAL SKILLS

Backend: Scala, Java, Spring Boot, MongoDB, SQL, MySQL, JUnit, Kafka, Redis, GraphQL

Frontend: HTML, CSS, JavaScript, Vue.js

Cloud & DevOps: Azure, Azure DevOps, Jenkins, Git, GitHub, Linux, Docker

Other: Python, C++, Object-Oriented Programming, Data Structures & Algorithms
